VPN-X Quick Start Guide

VPN-X is an easy-to-use VPN solution which can help you convert Internet to a LAN/Intranet.

Server Usage

Precondition:
Before installing VPN-X Server, you should make sure you have a public IP address.
Configuration:
1) Map/forward UDP 25000/500/4500 port and TCP 25000/25443 to Internet on your router/ADSL device. If your machine is on the internet, you can skip this step. If you can't understand Port Mapping/Forwarding, here are some useful links:

http://portforward.com/routers.htm
http://en.wikipedia.org/wiki/Port_forwarding
http://www.portforward.com/help/pfprogression.htm

2) Create VPN account in user management panel on VPN-X server

Client Usage

VPN-X Client:
1) Input VPN-X server public IP address or domain name.
2) Input user name and password created by VPN-X server administrator.
3) Click login. You need not change any other setting on the login dialog before you study user manual.
iPhone/iPad/Android built-in VPN:
1)Type: L2TP
2)Server: VPN-X server public IP address or domain name
3) Input user name and password
4)Secret(Pre-shared Key): 12345678 (you can change the default key on VPN-X server)

VPN-X User Manual

Please download VPN-X user manual.
